

Traffic Technology 2000

Road Safety with a System

The Benefits

- Reduces accidents
- Better resource management (material / labor)
- System flexibility
- Low cost installation
- Reasonably priced

Road State Information at your fingertips

The Advanced Road Surface Information System is what accident prevention is all about. Road conditions change rapidly and require fast interaction by the winter road maintenance crews in the event of potentially hazardous conditions. The ARSIS will send a warning/alarm to the road maintenance crew and/or other personnel if so required.

At the same time a message sign can alert the motoring public of the changing road conditions.

The Application
